

# Codex is your second operator.

Not a chatbot. Real work.

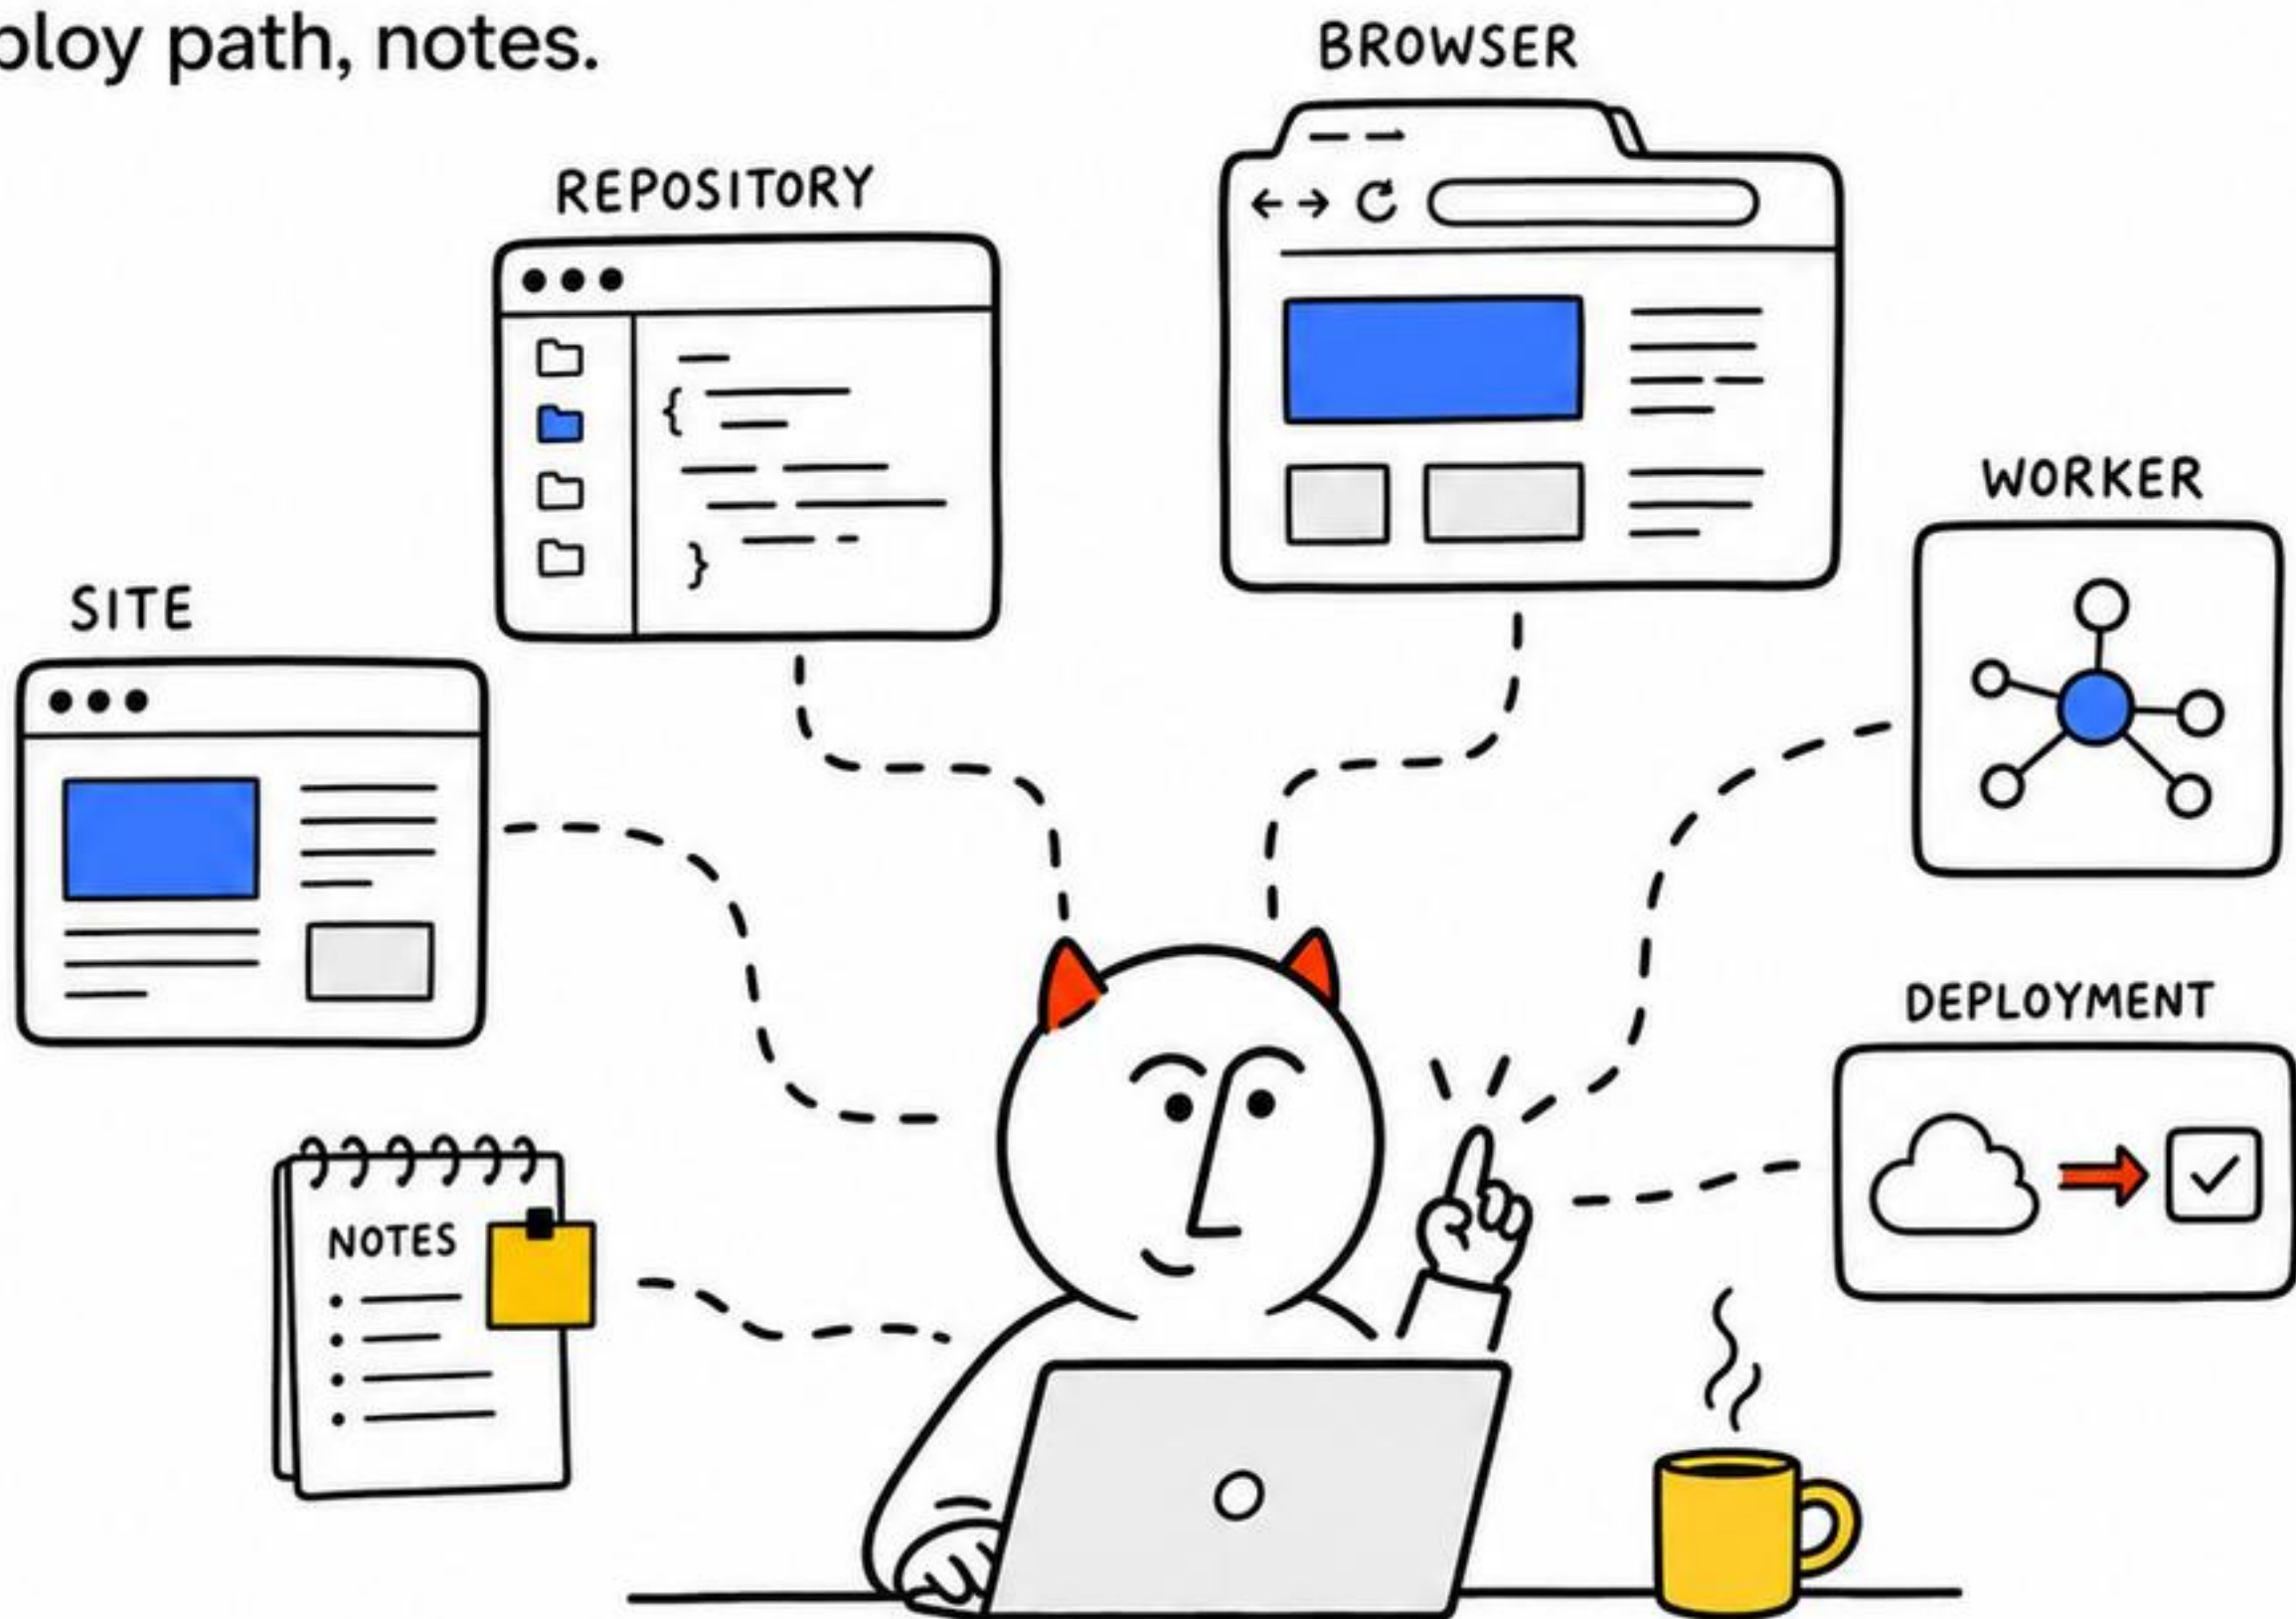

# Old loop. No compounding.

Same day, same result.

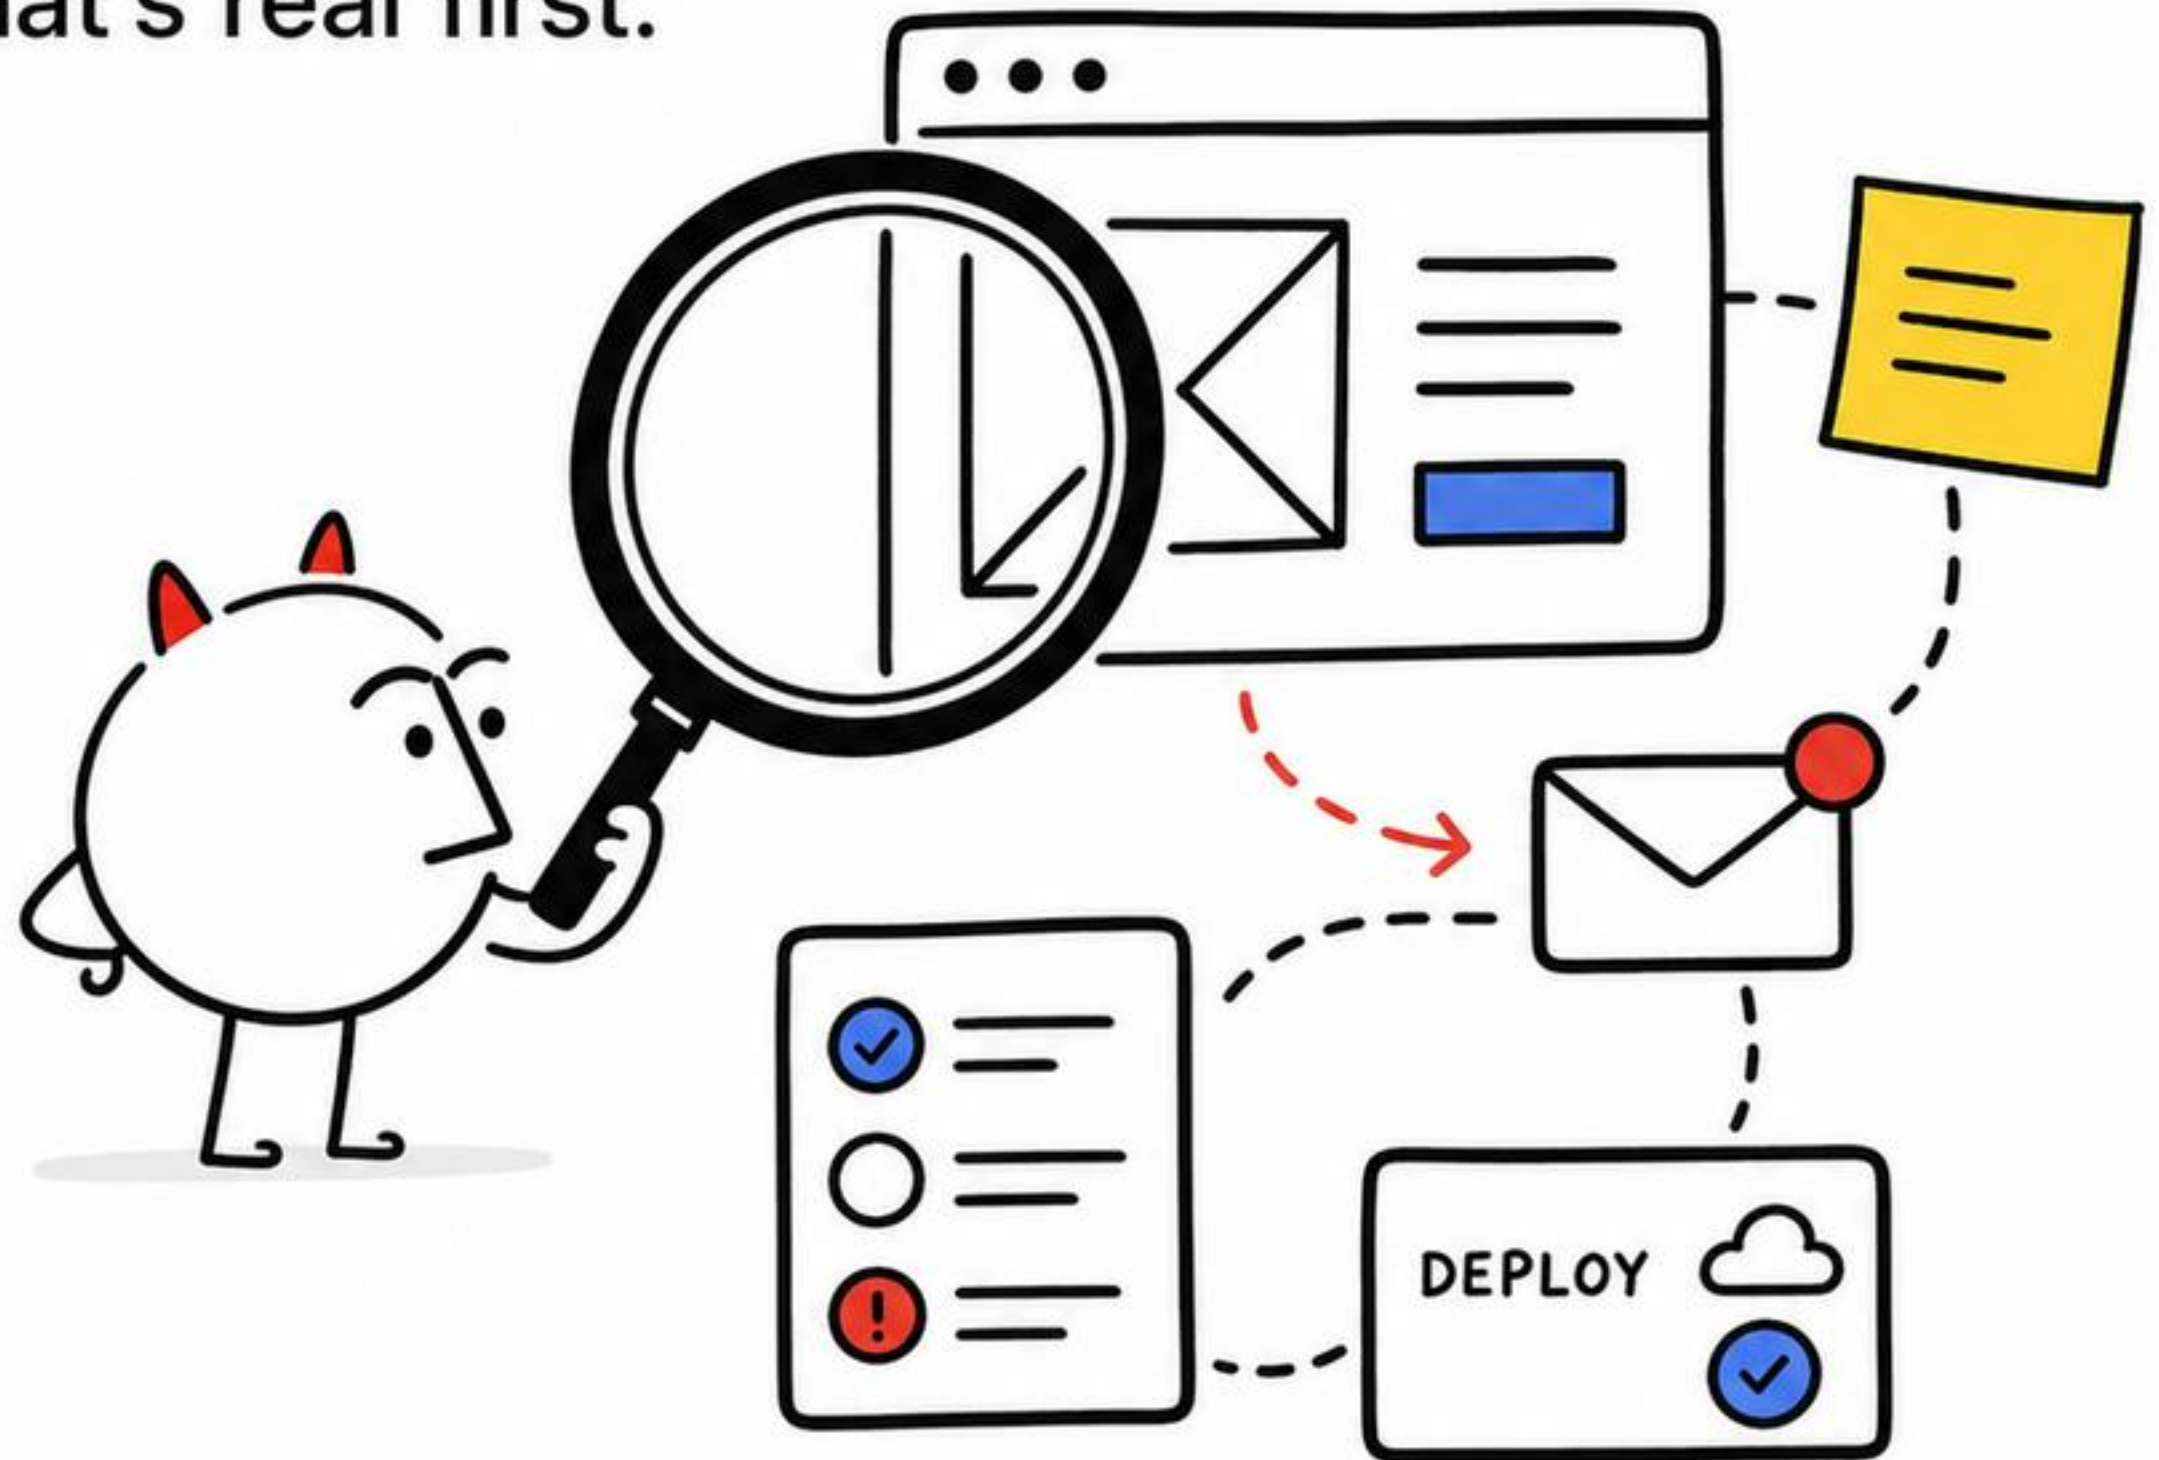

# AI works best when it sees the real workspace.

Repo, site, browser, worker, deploy path, notes.

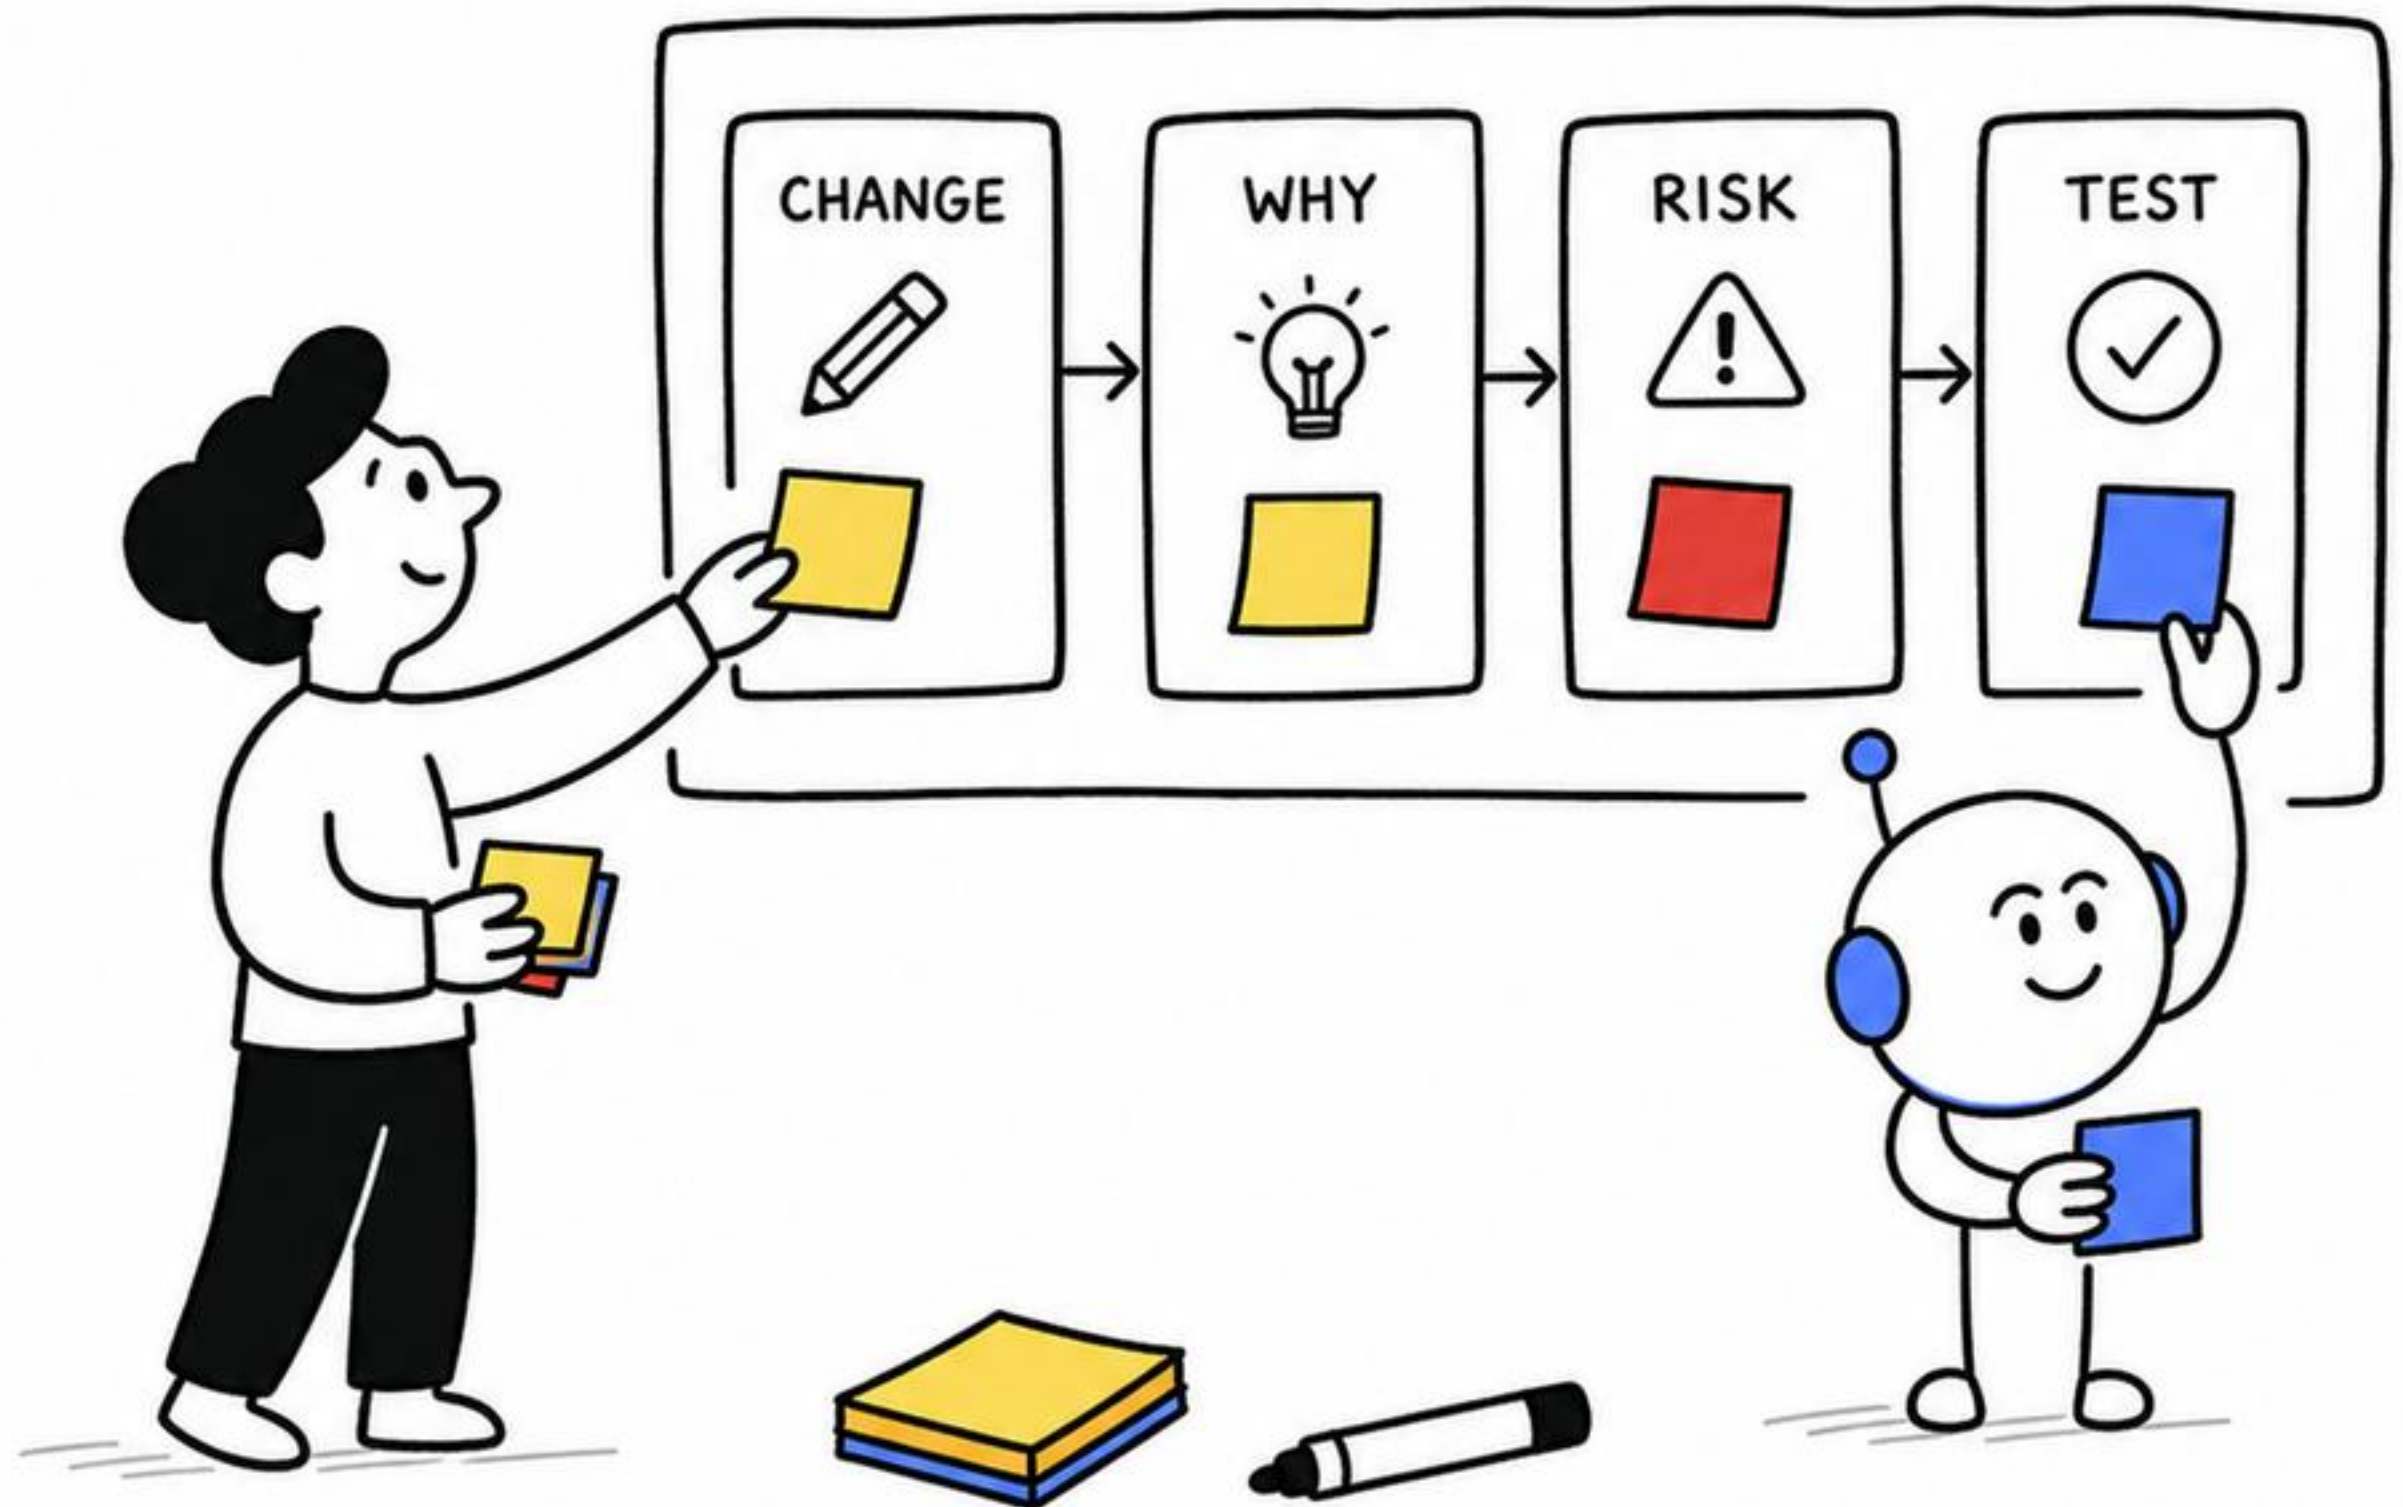

# Inspect before ideas.

See what's real first.

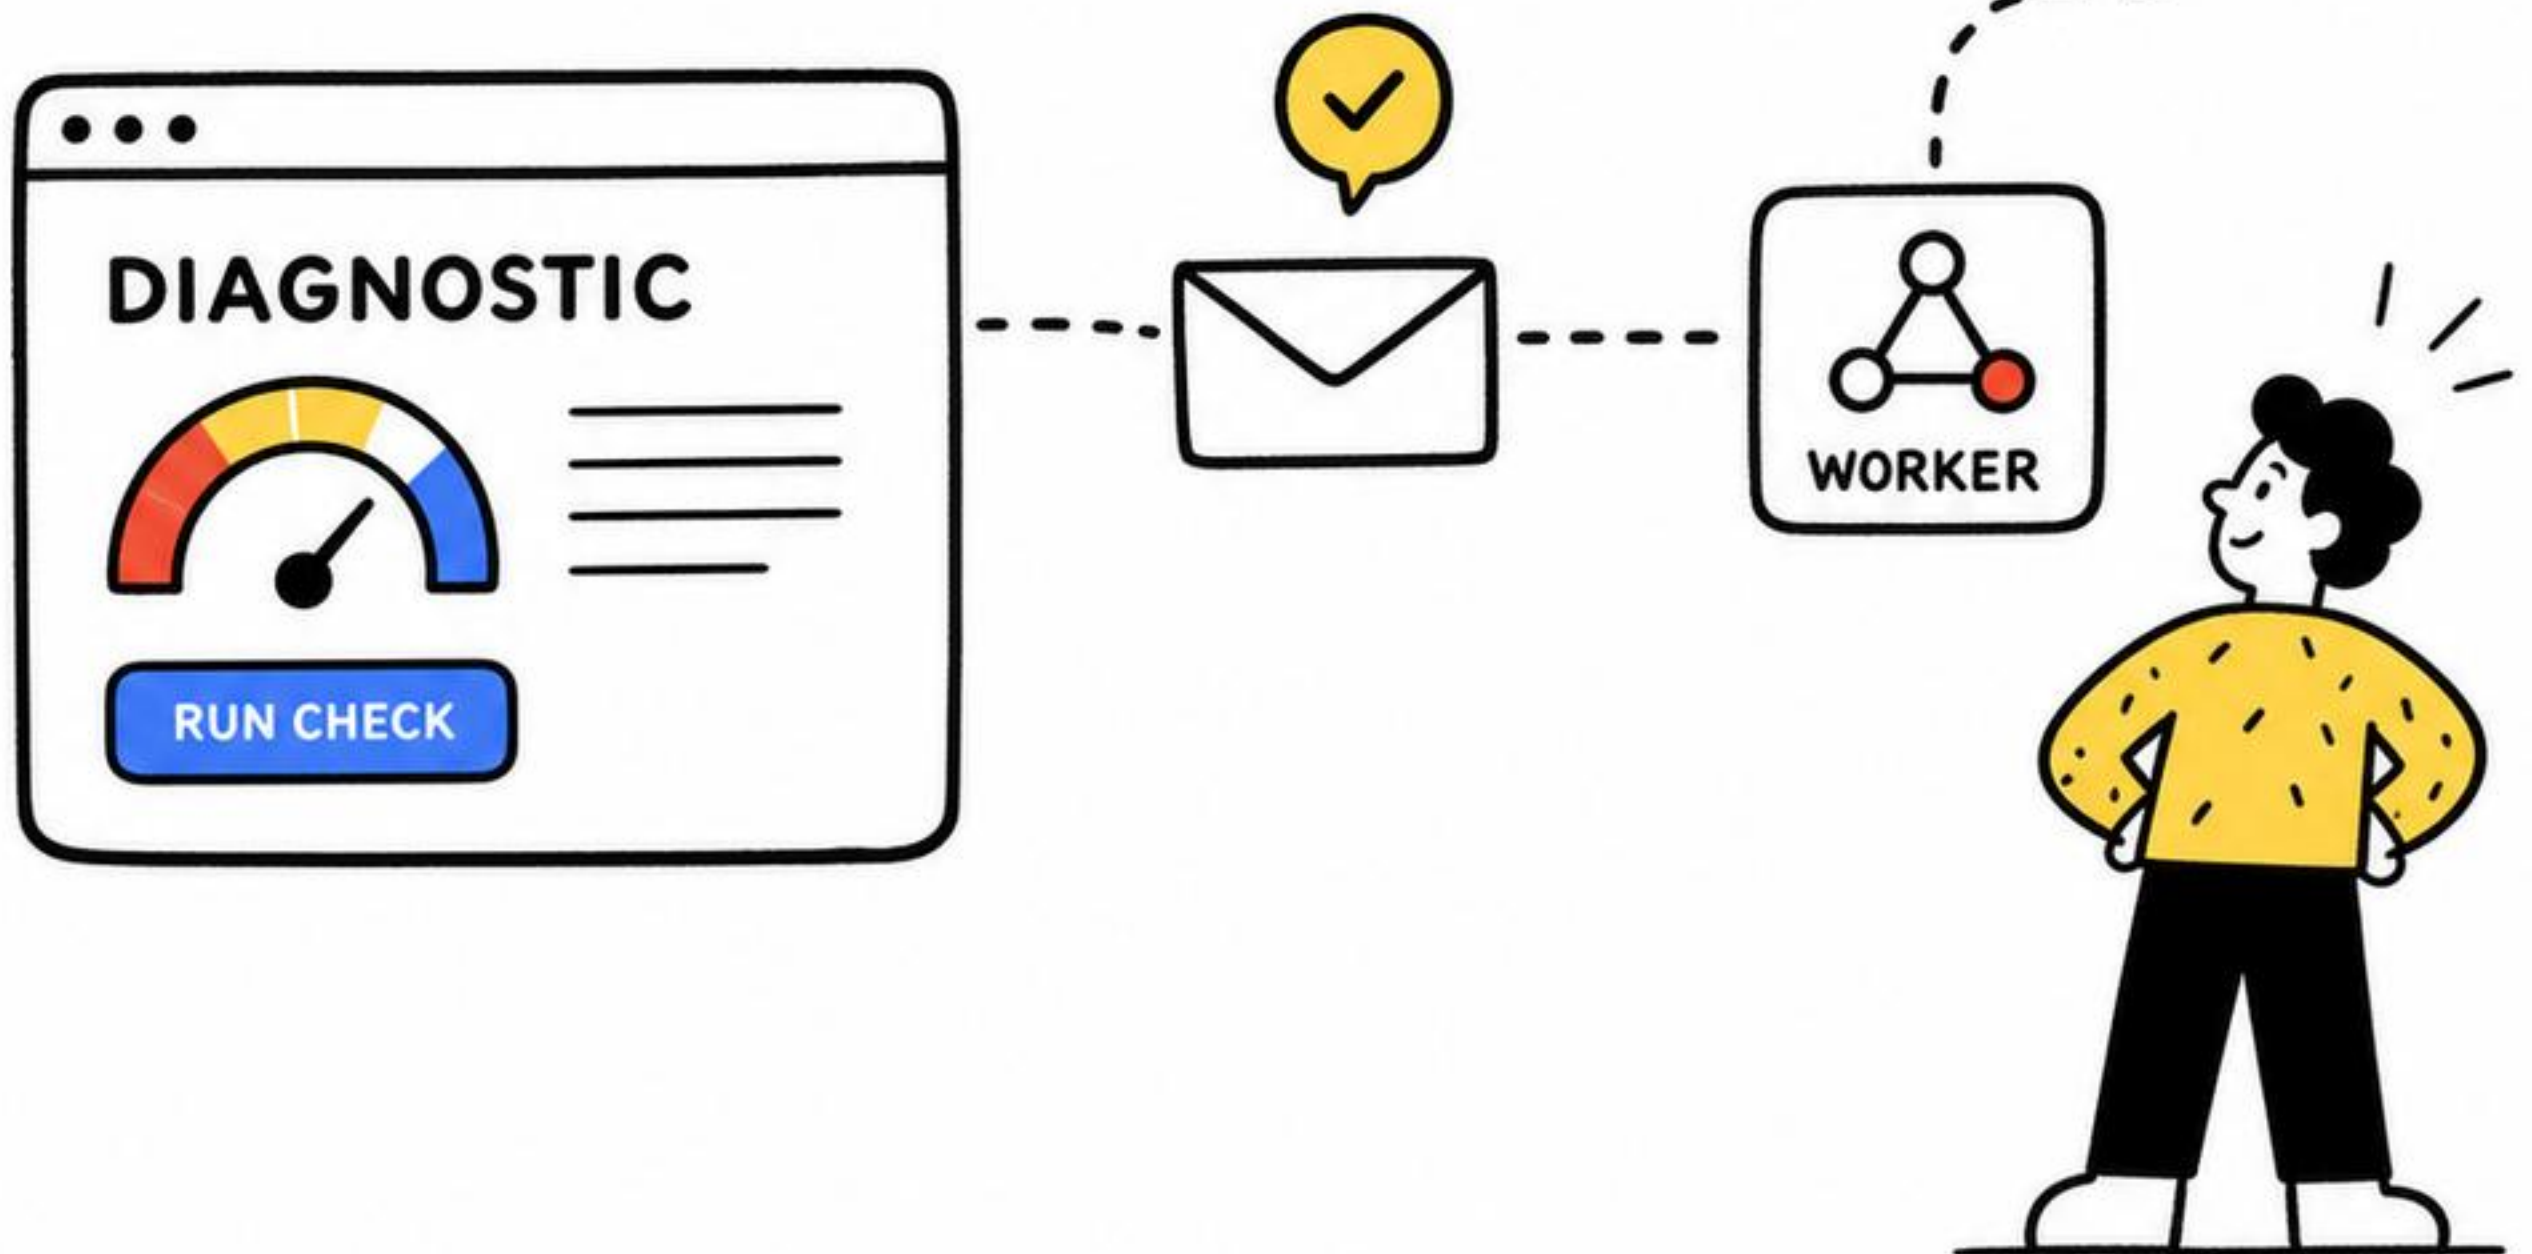

# Turn insights into an edit plan.

Change, reason, risk, test.

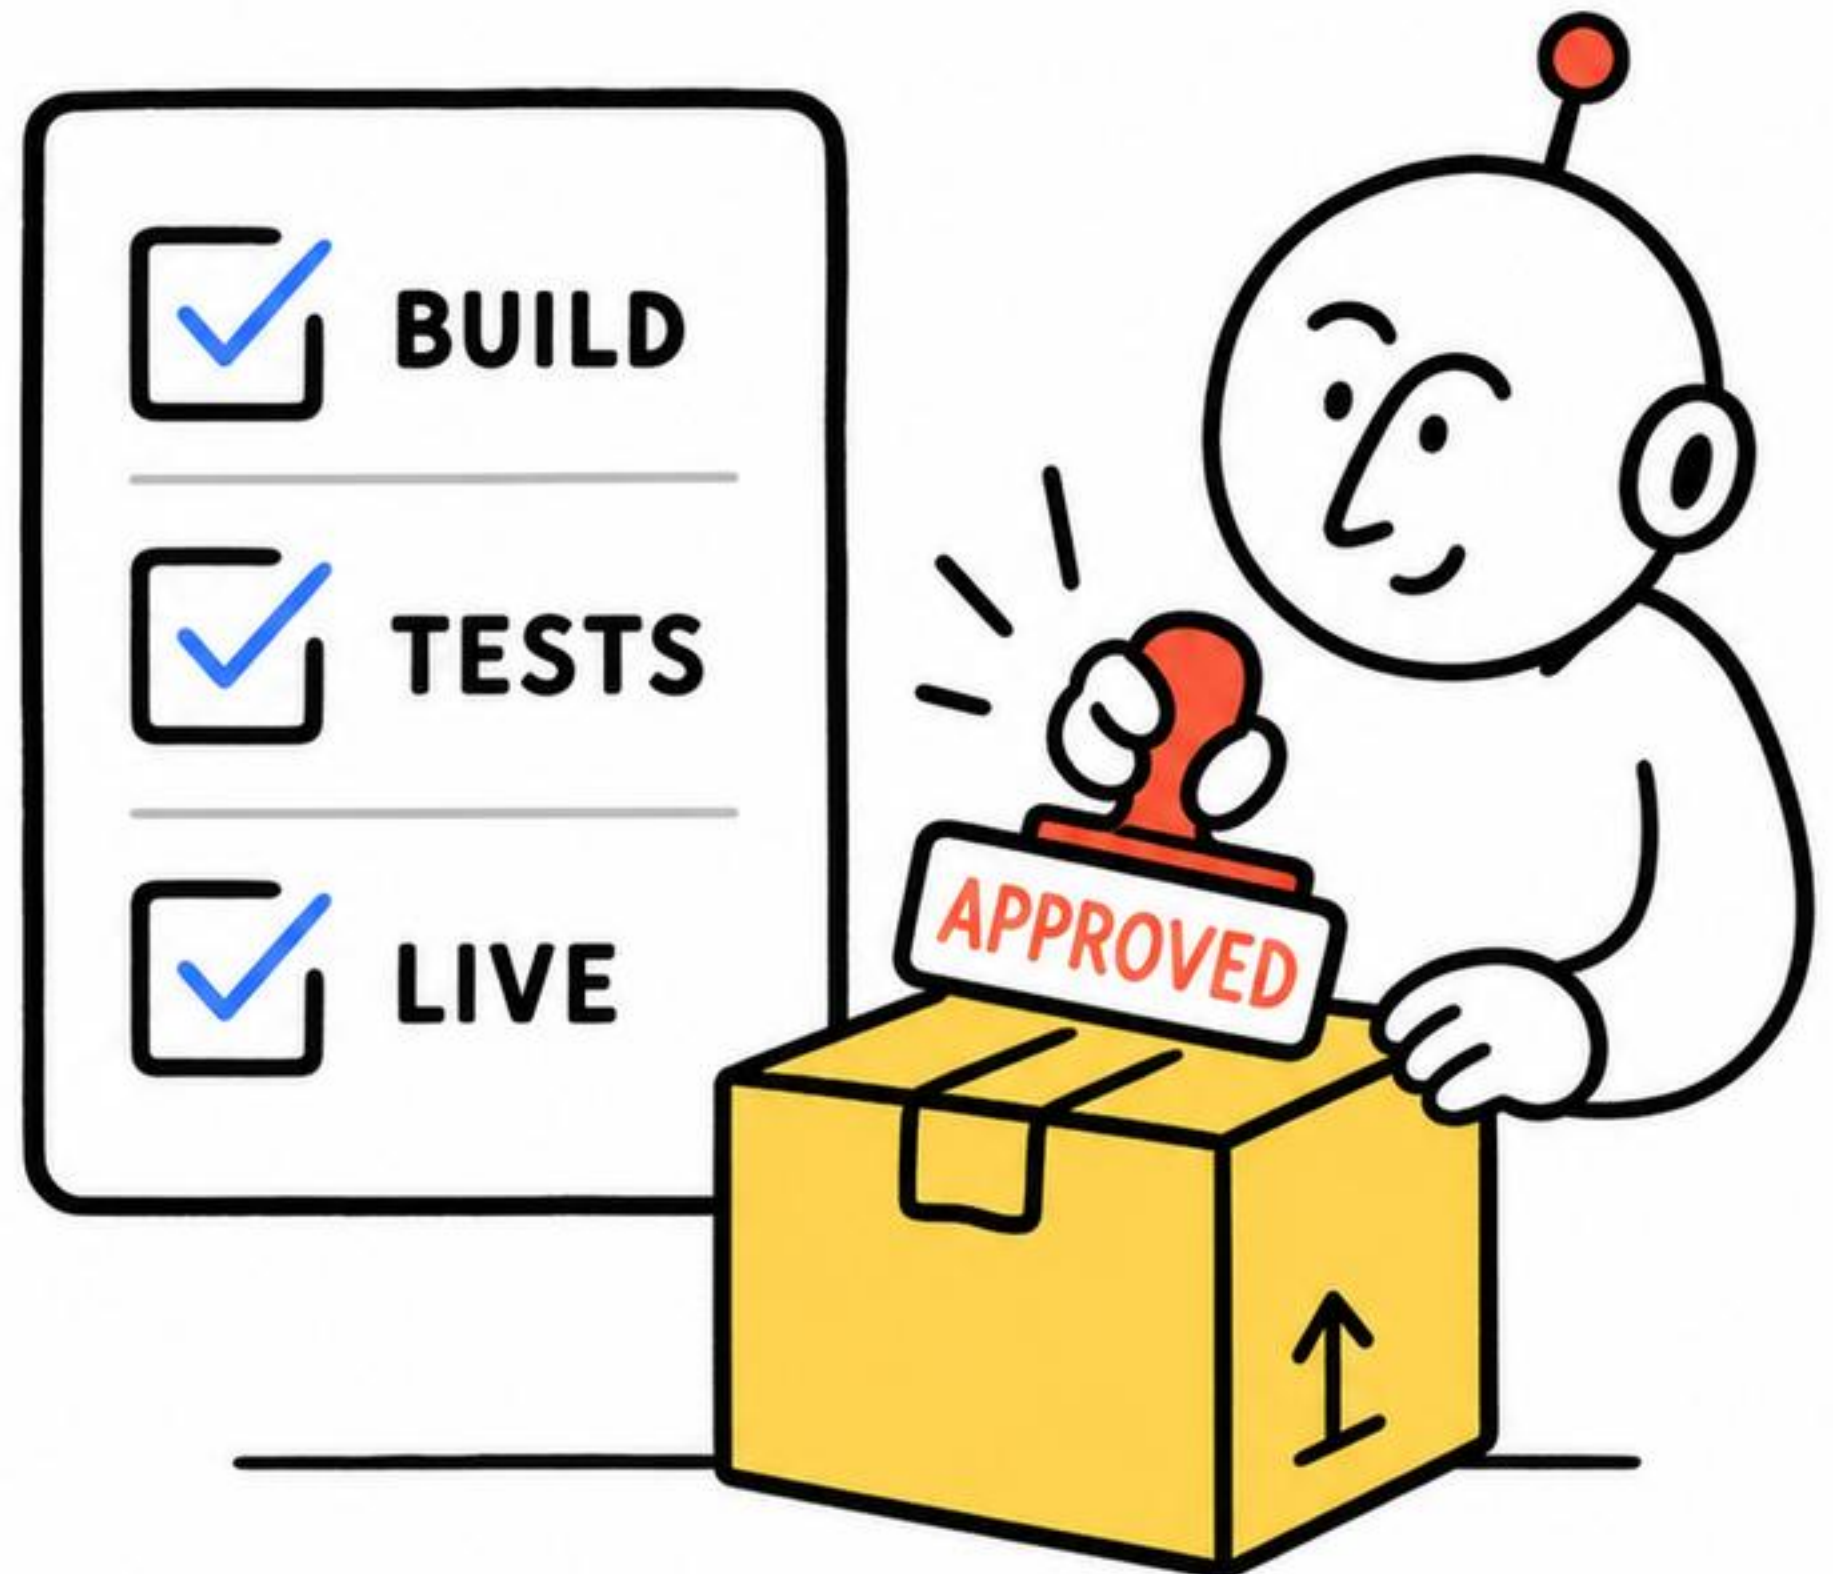

# Built it. Shipped it.

Diagnostic → email → worker → live

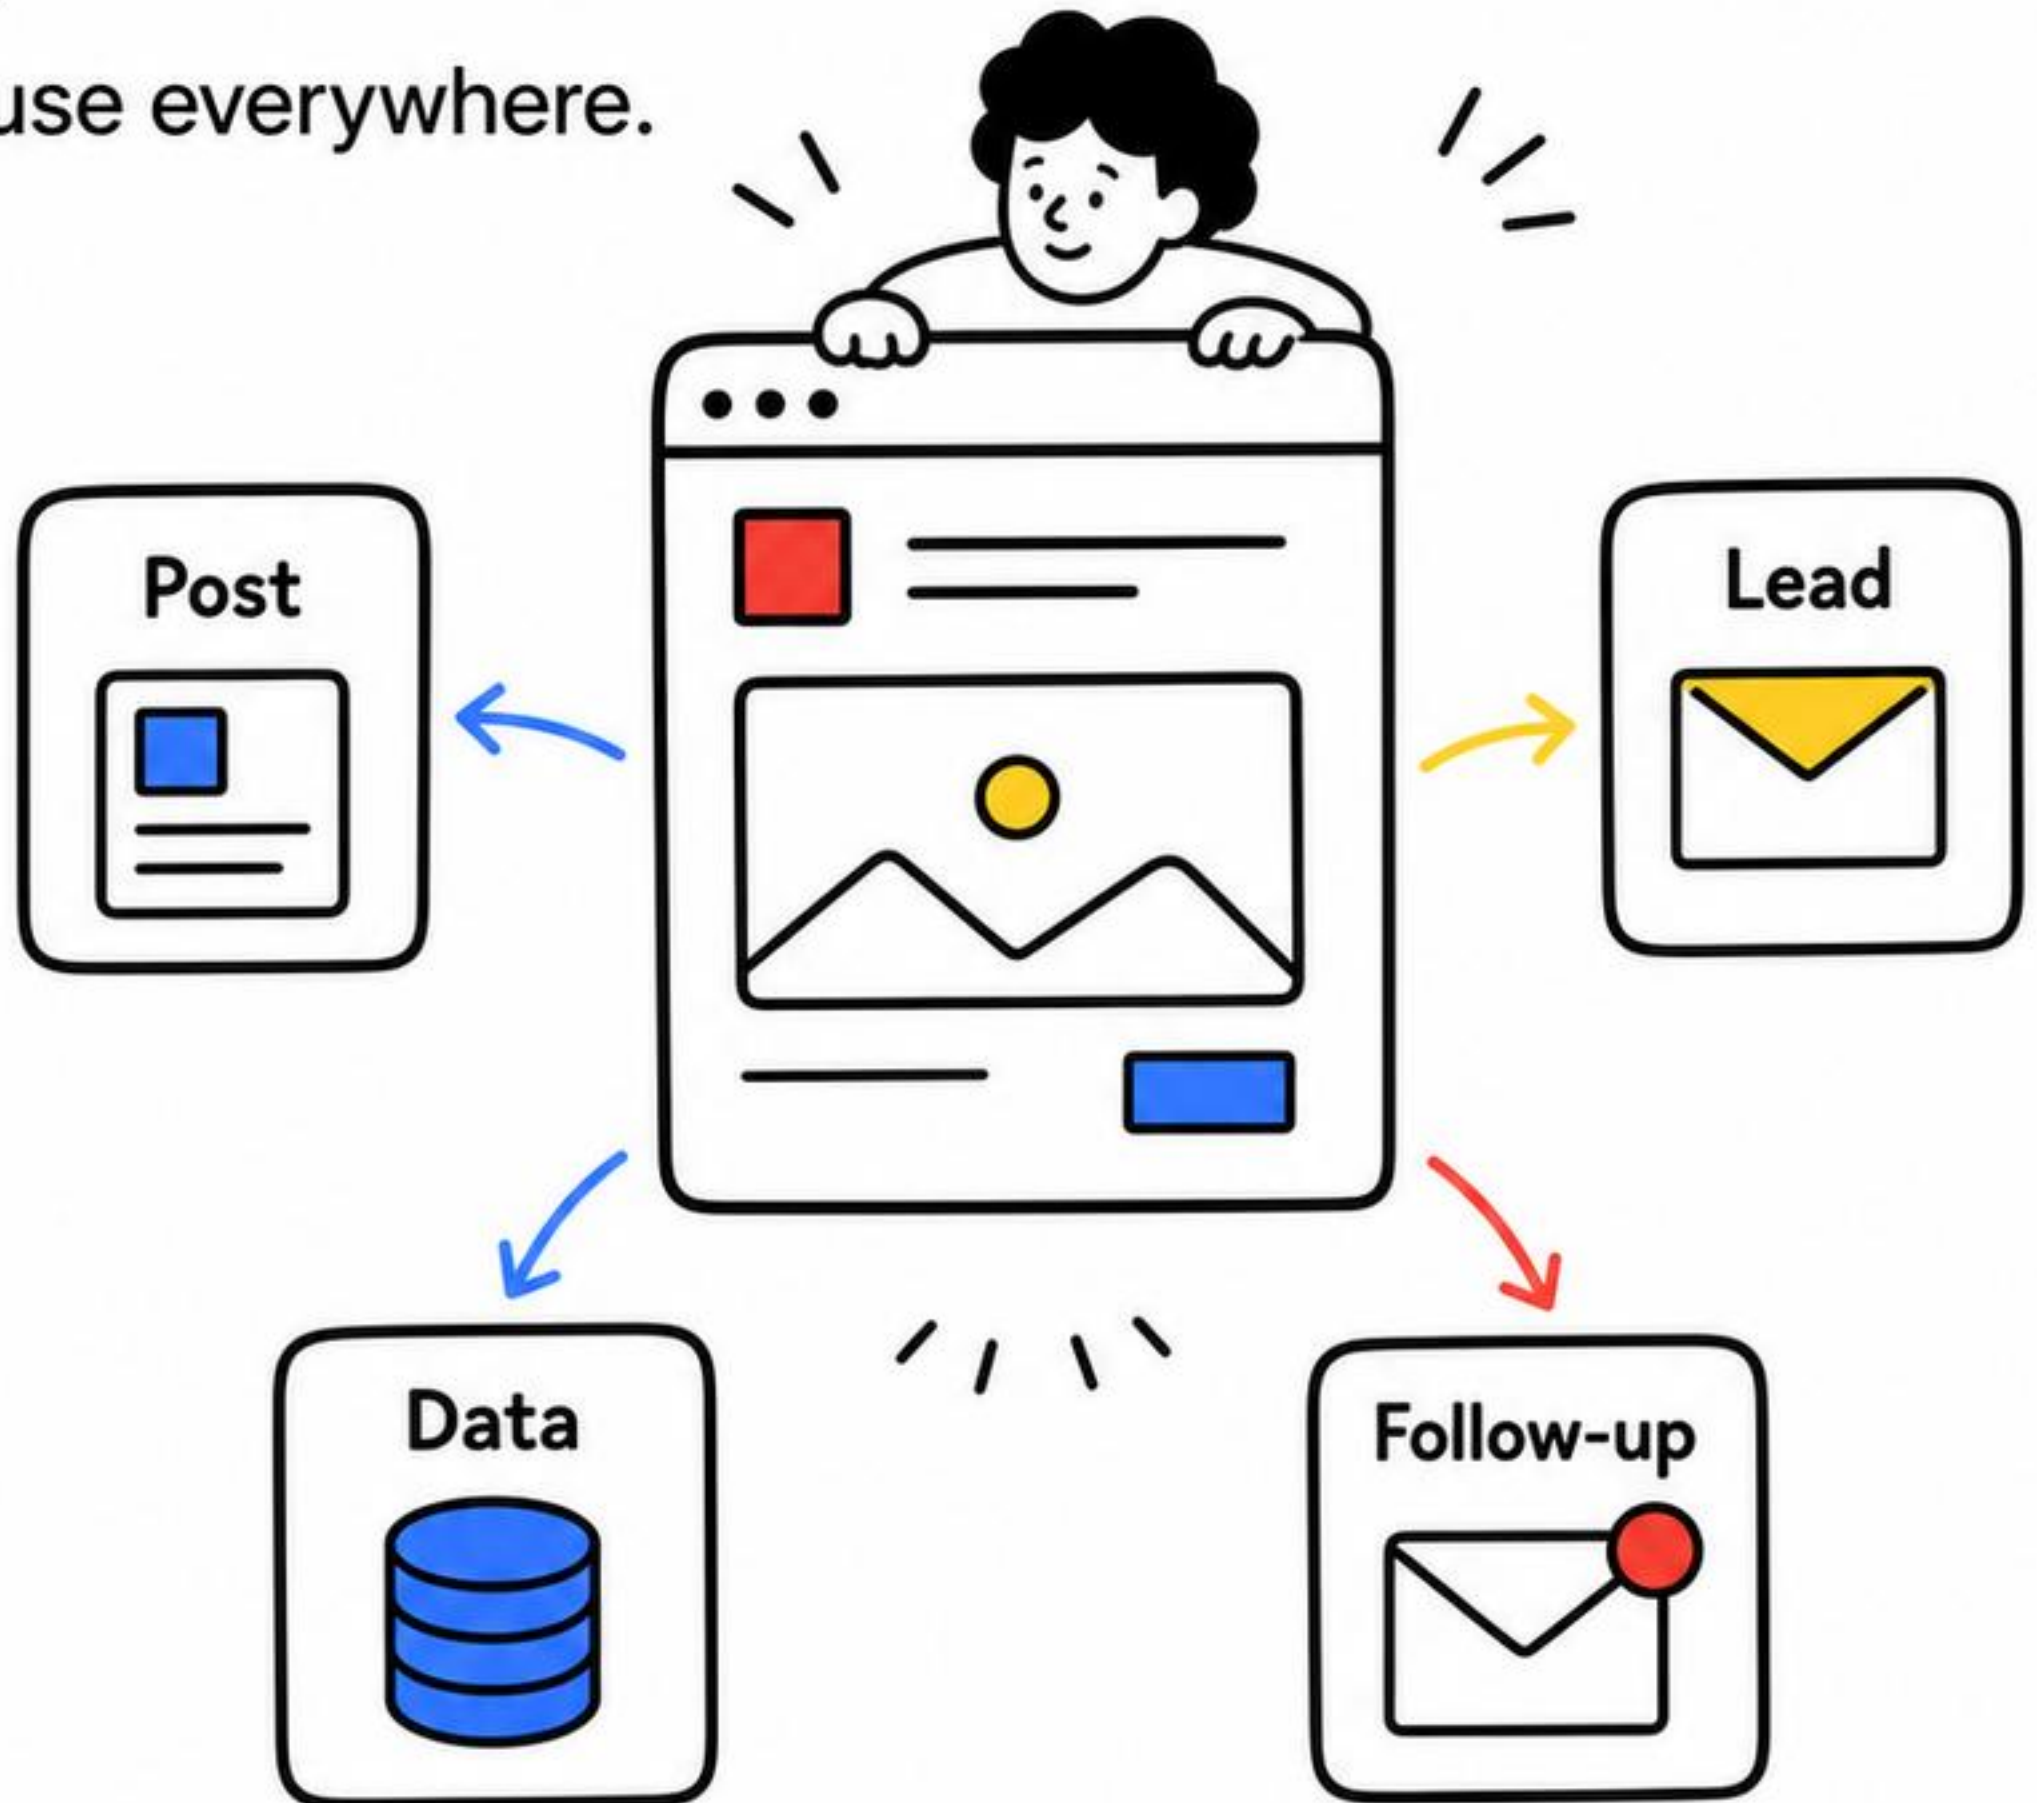

# Verify like an operator.

Build. Test. Check live. Ship with confidence.

# One workflow. Many assets.

Ship once. Reuse everywhere.

# Memory compounds. Teams win.

Inspect. Edit. Test. Ship. Remember.
